

Features	On-Premise GDM-BE	Hosted GDM
----------	-------------------	------------

System Level Administration

Maintain databases for components, BOMs, regulations or rules, with compliance data, substance data and associated documents	Yes. Databases are administrated by customer.	Yes. Databases are administrated by GreenSoft.
Software installation and implementation	On-Premise GDM-BE will be installed and implemented/configured at Customer’s facility and administered by the Customer’s IT behind Customer’s firewall.	Hosted GDM will be installed and implemented/configured at one of the Cloud servers administered by GreenSoft, outside Customer’s facility and firewall.
Implementation of GDM software upgrade	Customer’s IT will need to execute and administer the implementation of GDM software upgrades.	GDM software upgrades will be implemented by GreenSoft automatically.

Component Data Entry

Compliance Data Entry - collected by GreenSoft	Supports the Auto Download feature so that the compliance data collected by GreenSoft can be loaded to the GDM-BE server automatically.	Same as On-Premise GDM-BE.
Compliance Data Entry - collected by Customer	Customer can enter the component compliance data to GDM-BE themselves through manual edit or Excel import.	Data collected by Customer cannot be entered to Hosted GDM directly. Customer can send data to GreenSoft and GreenSoft will validate the data and convert to GreenSoft PartData format and then load the data to Hosted GDM. Or Customer can validate the data and convert to the GreenSoft PartData format and then load the data to Hosted GDM manually.

Features	On-Premise GDM-BE	Hosted GDM
----------	-------------------	------------

Compliance Validation and Gap Analysis

Dashboard for Item Master	Supports the dashboard function for all parts in Item Master with view of compliance status for each component on the desired regulations, and access to supporting documents through hyperlinks.	Same as On-Premise GDM-BE.
Summary for RoHS Exemptions	Supports the RoHS Exemption tables for all components in Item Master or BOMs and ability to view the detailed parts list for certain specific RoHS exemptions.	Same as On-Premise GDM-BE.
Dashboard for BOMs	Supports the dashboard function for all BOMs with view of compliance status of multiple regulations or OEM requirements, and the navigation of BOM details with compliance status and supporting documents for each component used inside the BOM.	Same as On-Premise GDM-BE.
GAP Analysis	Supports quick way of reviewing the compliance status for one BOM or multiple BOMs by checking the total number of parts with statuses of "compliant," "not compliant," "under exemption," or "unknown." Report can be generated on screen or exported to Excel.	Same as On-Premise GDM-BE.

Regulation Database

25-System Built-in Regulations	Supports 25 system built-in regulations including - 1. EU Directive Battery; 2. California Proposition 65; 3. California RoHS; 4. Canadian CanLII-Prohibition/Report of Certain Toxic Substances Regulations; 5. China RoHS; 6. Conflict Minerals Scan; 7. EU Directive Asbestos - 2009/148/EC - Quick Scan; 8. EU Directive Radioactive Substances - 96/29/EURATOM - Quick Scan; 9. EU Regulation - 1005/2009 Ozone Depletion Substances - Quick Scan; 10. EU RoHS - 6 substances/4 new substances; 11. Halogen Free; 12. Norwegian POHS; 13. Packaging and Packaging Waste; 14. EU Directive PFOS;	Same as On-Premise GDM-BE.
---------------------------------------	---	----------------------------

Features	On-Premise GDM-BE	Hosted GDM
----------	-------------------	------------

Regulation Database (continued)

<p>25-System Built-in Regulations (continued)</p>	<p>15. Rare Earth Substances - Examine Only; 16. REACH - Azocolourants; 17. REACH – CMR; 18. REACH – Carcinogens-1; 19. REACH - Carcinogens -2; 20. REACH - Mutagens; 21. REACH - Toxic for Reproduction; 22. REACH Annex-14; 23. REACH Annex-17 Scan; 24. REACH SVHC: from SVHC (15) to most recent SVHC (169); 25. Stockholm Convention POPs - 2004-05-17.</p>	<p>Same as On-Premise GDM-BE.</p>
<p>Customer Defined Rule</p>	<p>Supports Customer defined rules. Customer can define special requirements by specifying the substances and the respective thresholds.</p>	<p>For Hosted GDM, the Customer cannot define rules directly, but instead can send the requirements to GreenSoft and GreenSoft will add the rule(s) to Hosted GDM as part of the administration tasks (will incur cost).</p>

Compliance Reporting

<p>Compliance Status Report</p>	<p>Supports BOM level compliance status reports on any of the rules from the Rule database. Customer can set to generate the compliance report on the spot, or choose to schedule the report for future generation, one time or at fixed intervals.</p>	<p>Same as On-Premise GDM-BE.</p>
<p>Due Diligence Report</p>	<p>Supports the generation of due diligence reports for one BOM or multiple BOMs with parts list and the respective compliance status for each component and the associated compliance documents with hyperlinks.</p>	<p>Same as On-Premise GDM-BE.</p>
<p>Report Updates when Component Changes due to ECOs</p>	<p>Supports the compliance status update on component changes due to ECOs. When a new component is added to a subassembly that is used by many BOMs, GDM-BE will re-calculate the BOM compliance status and generate the compliance reports per the scheduler set up by the Customer. The updated compliance info from the newly added component(s) will be propagated to all BOMs.</p>	<p>Same as On-Premise GDM-BE.</p>
