

FOR IMMEDIATE RELEASE

GreenSoft Technology, Inc. Releases Component Disclosure Module for Substance Data Management

Pasadena, CA, October 30, 2019 – GreenSoft Technology, Inc., a leading provider of environmental compliance data services and software, has released a software solution for component manufacturers that need to track material substance data and respond to customer requests for data: GreenData Manager with Component Disclosure Module (GDM w/ CDM) software. GDM w/ CDM software automates the management of parts data and data updates for manufacturers.

Previously, component manufacturers had to deal with the time-consuming and repetitive process of manually fulfilling customer requests for compliance declarations on their products. As regulations such as EU RoHS, EU REACH, California Proposition 65, and others get changed and updated, the manufacturer's compliance team must continuously update and maintain their material substance files. And when customers come back with repeat requests for updated compliance declaration reports, the process for manufacturers can be never-ending.

To solve these issues, GreenSoft Technology developed the GDM w/ CDM software solution for component manufacturers to manage their materials database. GDM w/ CDM allows manufacturers to establish a company-wide material database with substance makeup data.

The intelligent change management system in GDM w/ CDM will track the changes of every material, and propagate those changes to the final Full Material Declaration (GDM) data for package codes or component part numbers.

Features include the evaluation of the compliance status of the manufacturer's materials for 24 built-in regulations, data entry accuracy checks, accessibility by multiple users that share the same material database with real-time changes and edits, and more.

FMD data for package codes or components can be exported in Excel, IPC-1752A XML, and IEC 62474 XML formats. Plus, Excel template export files can be customized with the manufacturer's company logo, address, and other information.

Additionally, GDM w/ CDM allows manufacturers to eliminate the process of fulfilling individual customer requests for compliance declarations. The exported Excel files with FMD data from GDM w/ CDM can be uploaded to the manufacturer's website and then downloaded by their customers, providing an instant high-level of customer support without needing to manually respond to requests or re-issue documents every time a material or regulation is changed.

More information about the GreenData Manager with Component Disclosure Module (GDM w/ CDM) can be found online at <http://greensofttech.com/site/software/component-disclosure-module/>.

About GreenSoft Technology, Inc.

GreenSoft Technology is a leading provider of environmental compliance data management tools and services for global industries including electronics, medical devices/life sciences, aerospace and defense, communications, audio/visual, semiconductors and components. GreenSoft's Data Services streamline development cycles, cut procurement costs, reduce risk, and aid in environmental compliance reporting. GreenSoft's GreenData Manager® (GDM) software provides an out-of-the-box compliance management solution for manufacturers. GreenSoft is ISO 9001:2015 certified and is headquartered in Pasadena, California. For more information, visit www.greensofttech.com.
